PROJECTS

Video Generation from Learned Priors Jul 2019 – Nov 2019

- Supervisor: Dr. Amit K. Roy-Chowdhury

- **Goal**: Generate short video clips without pixel inputs.
- Designed a generative network to generate the realistic videos using learnable latent vectors, using non-adversarial approach.
- Introduced a novel triplet condition on the latent vectors to get good latent vector representation of video frames.

Multi-View video frame prediction using STAR-GAN Mar 2019 – Jun 2019

- Supervisor: Dr. Amit K. Roy-Chowdhury

- **Goal**: Predict missing frames in one camera view using other reference camera views.
- Designed a STAR-GAN based model to predict missing frames in one camera by using view-parallel frames from other reference cameras.
- Introduced a novel cycle consistency based loss for learning a weighted relationship between missing frame and corresponding reference frames from other cameras.

Continual Learning in Person Re-ID systems Jan 2019 – Mar 2019

- Supervisor: Dr. Amit K. Roy-Chowdhury

- **Goal**: Design a global Person-ReID system to work for different places without forgetting previous data distribution
- Designed a deep generative network based model to allow a Person Re-ID system to continuously learn different scenarios (in this case, different datasets) without forgetting past person identities in different conditions.
